

TERPS > THC

A high THC percentage doesn't equate to quality.

There, we said it.

The same way a fine wine is not defined by its alcohol content, exceptional cannabis should not be measured solely by its wallop.

The "good stuff", shall we say, is best characterized by its combination of terpenes and the delightful (and varied) effects they deliver. In the end, terpenes are what we obsess over. Not THC. And though we happily offer tickets to the stratosphere, we are far more proud of the unique flavors and aromas our products possess, and how much they influence your overall experience.

A dramatic, low-angle shot of a massive, dark rock face. The rock surface is textured with horizontal and diagonal fissures. In the upper left, three small figures of rock climbers are silhouetted against the bright sky as they ascend the cliff. The right edge of the cliff shows a more vertical, jagged profile. In the bottom right corner, a small portion of a forested hillside is visible.

Since 2010, our mission has been to offer a dizzying array of the finest cannabis products imaginable. Years of obsession, creativity, and higher-than-average lung capacity got us to where we are now: the very best of Colorado.

CONCENTRATE

# COLD CURE LIVE ROSIN

The literal cream of the crop.

Live Rosin is pressed from our fresh, frozen Ice Water Hash, further filtering away any unwanted plant material. This highly resinous concentrate was crafted without the use of solvents, making it the purest expression of any given cultivar. At 14er, we cold cure our Live Rosin to create a creamy, shelf-stable product that is cherished by both connoisseurs or anyone looking for a delectable and potent dabbing experience.

## ROSIN JAM

Jam is a heat cured solventless extraction that allows for THCA crystals to separate (crash out) from the terpene solution. This process creates a jam-like texture in the final product. The Jam exhibits a slight variation on the terp profile of our cold cure, not unlike the Fresh Press, while remaining shelf-stable at room temperature. Jam textures can range from sugar wax to something much saucier.

## FRESH PRESS LIVE ROSIN

Just like our Cold Cure Live Rosin...only it's not Cold Cured, just fresh from the press. Skipping this step maintains the original terpenes and allows the customer to take control of the curing process. For an ultra-tasty and unique dabbing experience, it's a must try.

# LIVE RESIN

Live Resin is also made from our fresh, frozen flowers. The resin is extracted using a hydrocarbon blend to preserve terpenes and cannabinoids while leaving behind any undesirable plant compounds. The extract is then aged in a controlled environment, allowing the terpenes to separate and the cannabinoids to crystalize, resulting in a delectable and saucy concentrate.

Our Live Resin is made in cahoots with the expert craftsmen at Apothecary Extracts and Viola.

# BUBBLE HASH

We just had to. Call us nostalgic.

While our Bubble Hash is extremely limited, our hopes are to start producing much more. Our Bubble Hash is made with the use of Bubble Bags, using simple ice water, agitation and various micron screens. The result is countless trichomes that are formed into little pearls that bubble up when exposed to flame.

It's an oldie but goodie.

# TERPNOLOGICALLY ADVANCED

This **CCELL** powered vape system is sleek, discreet and durable enough to accompany you on your next adventure. This high performance battery is inhale activated with a self-adapted optimal temperature setting. With a minimalist and buttonless design, there's no guesswork. Just pure and simple enjoyment for on-the-go use or for not going anywhere at all.

\*The Flint pod battery is rechargeable and comes with its own USB charging cable and Micro-USB port.

## CHOOSE YOUR OWN ADVENTURE

Our pods are pre-loaded with either Live Rosin or CannaTerp Oil (CT Oil). Both options are made from 100% 14er material and only vary based on solvents used or not used. Both deliver rich flavor and ample potency. By offering two forms of concentrates, users can choose their favorite strains along with a vaping experience that caters to their individual interests.

# WELCOME TO FLAVORTOWN

Like our other offerings, when it comes to our pods, variety and quality are the two biggest factors we obsessed over. Everything from our in-house genetics to our guest (or “wildflower”) strains get a shot in our vape pods. Nothing beats the on-the-go ease and smooth, authentic flavor that these pods deliver. The idea of being able to take your favorite strains along for the ride is what makes our immense infatuation with variety seem much more logical.
